Journal of
Computational Chemistry

Volume Contents
Volume 15, 1994
Issue 1, January 1994

Updated Hessian Matrix and the Restricted Step Method for Locating Transition Structures 1
Josep Maria Bofill

Comparison of NDDO and Quasi-*Ab Initio* Approaches to Compute Semiempirical Molecular Electrostatic Potentials 12
C. Alhambra, F. J. Luque, and Modesto Orozco

Hydrating Peptides Using a Sprouting Technique 23
Carl W. David

Performance of Fast Multipole Methods for Calculating Electrostatic Interactions in Biomacromolecular Simulations 28
Jiro Shimada, Hiroki Kaneko, and Toshikazu Takada

Implementation of a Data Parallel, Logical Domain Decomposition Method for Interparticle Interactions in Molecular Dynamics of Structured Molecular Fluids 44
William S. Young and Charles L. Brooks III

Newton–Raphson Optimization of the Explicitly Correlated Gaussian Functions for Calculations of the Ground State of the Helium Atom 54
Zhenghong Zhang, Pawel M. Kozlowski, and Ludwik Adamowicz

Simulations of the Solution Structure of HIV-1 Protease in the Presence and Absence of Bound Zinc 61
D. M. York, L. J. Bartolotti, T. A. Darden, L. G. Pedersen, and M. W. Anderson

Canonical Numerical Methods for Molecular Dynamics Simulations 72
Daniel I. Okunbor and Robert D. Skeel

Display of the Flow of Energy in Molecules 80
Charles D. Schwieters and Herschel Rabitz

General Parameterization of a Reaction Field Theory Combined with the Boundary Element Method 90
Takao Furuki, Akihiro Umeda, Minoru Sakurai, Yoshio Inoue, Riichirô Chûjô, and Kazuaki Harata

Free Energy Derivatives: A New Method for Probing the Convergence Problem in Free Energy Calculations 105
David A. Pearlman

Diskette Submission Instructions 124

Issue 2, February 1994

Applicability of the WKB Method in Asymmetric Double Wells with Degenerate and Nondegenerate Minima 125
Ricard Gelabert, Miquel Moreno, and José M. Lluch

Conformation and Reactivity of α-Oxo-Ketenes: *Ab Initio* and Semiempirical (AM1, PM3) Calculations 132
Rudolf Janoschek, Walter M. F. Fabian, Gert Kollenz, and C. Oliver Kappe

Parallel Algorithm for Calculating Ro-Vibrational States of Diatomic Molecules 144
J. J. Soares Neto

Free Energy of Solvation of a Small Lennard–Jones Particle 149
Ching-Lung Lin and Robert H. Wood

Rationalizing Nuclear Overhauser Effect Data for Compounds Adopting Multiple-Solution Conformations 155
Mark J. Forster and Barbara Mulloy

Derivation of Class II Force Fields. I. Methodology and Quantum Force Field for the Alkyl Functional Group and Alkane Molecules 162
J. R. Maple, M.-J. Hwang, T. P. Stockfisch, U. Dinur, M. Waldman, C. S. Ewig, and A. T. Hagler

Semiempirical Study of Compounds with Intramolecular O—H - - - O Hydrogen Bonds. II. Further Verification of a Modified MNDO Method 183
Jesús Rodríguez

Utilization of Shape Data in Molecular Mechanics Using a Potential Based on Spherical Harmonic Surfaces 190
Arun Malhotra, Robert K.-Z. Tan, and Stephen C. Harvey

Atomic Charges Derived from a Fast and Accurate Method for Electrostatic Potentials Based on Modified AM1 Calculations 200
Bingze Wang and George P. Ford

Conformational Sampling of Hydrocarbon and Lipid Chains in an Orienting Potential 208
Barry J. Hardy and Richard W. Pastor

Preconditioners for Distance Matrix Algorithms 227
W. Glunt, T. L. Hayden, and M. Raydan

A Ring-Bracing Approach to Computer-Assisted Ligand Design 233
Andrew R. Leach and Richard A. Lewis

Computational Study of the Hydrolysis of Degradable Polysaccharide Biomaterials: Substituent Effects on the Hydrolytic Mechanism 241
Lawrence M. Pratt and C. C. Chu

Announcement 249

Diskette Submission Instructions 250

Issue 3, March 1994

Force Field Calculations (MM3) on Glyoxal, Quinones, and Related Compounds 251
Norman L. Allinger and Yi Fan

Quantum Mechanical Computations on Very Large Molecular Systems: The Local Self-Consistent Field Method 269
Vincent Théry, Daniel Rinaldi, Jean-Louis Rivail, Bernard Maigret, and György G. Ferenczy

Molecular Mechanics (MM3) Calculations on Alkyl Radicals 283
Ruifeng Liu and Norman L. Allinger

Finite-State and Reduced-Parameter Representations of Protein Backbone Conformations 300
Ljubomir J. Buturović, Temple F. Smith, and Sandor Vajda

A Comparative Study of Effective Core Potential and Full-Electron Calculations in Mo Compounds. I. An Analysis of Topological Properties of Bond Charge Distribution 313
Anibal Sierraalta and Fernando Ruette

The Structures of LiNc, NaNC, and KNC: Potential Energy Surface for the Orbiting Motion of the Metal Cation Around the CN Group 322
Andrea Dorigo, Paul von Ragué Schleyer, and Pavel Hobza

Molecular Simulation of Alkyl Boronic Acids: Molecular Mechanics and Solvation Free Energy Calculations 333
Xiannong Chen, Libero Bartolotti, Khalid Ishaq, and Alexander Tropsha

Ab Initio Study of Low-Lying Electronic States of the PF_2 Radical 346
Z.-L. Cai

Free Energy Perturbation Calculations on Parallel Computers: Demonstrations of Scalable Linear Speedup 351
Stephen E. DeBolt, David A. Pearlman, and Peter A. Kollman

Diskette Submission Instructions 375

Issue 4, April 1994

Normal Coordinates–Finite Elements Calculation of 3D Vibrational Energy Levels: Henon–Heiles and Eckart Potentials, H_3^+ Molecule 377
J. R. Alvarez-Collado

Ab Initio Molecular Orbital Study of 1-Fluorosilatrane 385
G. I. Csonka and P. Hencsei

Modulation of Intramolecular Proton Transfer by Electronic Excitation and Environment: 2-Pyridone as a Case Study 395
Vincenzo Barone and Carlo Adamo

Transferable Semiempirical Quadratic Force Fields: The Case of Polythiophene and Shorter Oligomers 405
F. J. Ramírez, V. Hernández, and J. T. López Navarrete

MRD-CI Studies of Vertical Excitation Energies of Unsaturated Hydrocarbon Molecules 424
S. Grimme

Monte Carlo Simulations on Short Single-Stranded Oligonucleotides. I. Application to RNA Trimers 433
Mahmoud Ghomi, Jean-Marc Victor, and Charles Henriet

Optimization of Solute Cavities and van der Waals Parameters in *Ab Initio* MST-SCRF Calculations of Neutral Molecules 446
M. Bachs, F. J. Luque, and Modesto Orozco

Parametrization of a Force Field for Studying Some Beta-Lactams 455
Berta Fernández and Miguel A. Ríos

Relativistic Dirac–Fock Calculations for Closed-Shell Molecules 466
L. Pisani and E. Clementi

Announcements 475

Diskette Submission Instructions 477

Issue 5, May 1994

Theoretical Analysis of the Role of the Solvent on the Reaction Mechanisms: One-Step versus Two-Step Ketene–Imine Cycloaddition 479
X. Assfeld, M. F. Ruiz-Lopez, J. Gonzalez, R. Lopez, J. A. Sordo, and T. L. Sordo

ICM—A New Method for Protein Modeling and Design: Applications to Docking and Structure Prediction from the Distorted Native Conformation 488
Ruben Abagyan, Maxim Totrov, and Dmitry Kuznetsov

On the Analytical Calculation of van der Waals Surfaces and Volumes: Some Numerical Aspects 507
Michel Petitjean

New Approach to the Semiempirical Calculation of Atomic Charges for Polypeptides and Large Molecular Systems 524
Ulrich Sternberg, Frank-Thomas Koch, and Margit Möllhoff

A Truncated Newton Minimizer Adapted for CHARMM and Biomolecular Applications 532
Philippe Derreumaux, Guihua Zhang, Tamar Schlick, and Bernard Brooks

Variation of Atomic Charges during Proton Transfer in Hydrogen Bonds 553
Jan Florián and Steve Scheiner

Analysis of the Ring-Form Tautomers of Psicose with MM3(92) 561
Alfred D. French and Michael K. Dowd

Announcement 571

Diskette Submission Instructions 572

Issue 6, June 1994

Direct One-Index Transformations in Multiconfiguration Response Calculations 573
Olav Vahtras, Hans Ågren, and Hans Jørgen Aa. Jensen

Interaction between Carbon Dioxide and Naphthalene: A Molecular Modeling Approach 580
P. Battersby, J. R. Dean, S. M. Hitchen, W. R. Tomlinson, and P. M. Myers

Application of Genetic Algorithms in Molecular Modeling 588
Tilman Brodmeier and Ernö Pretsch

Structures and Stabilization Energies of Methyl Anions with Main Group Substituents from The First Five Periods 596
Ahmed M. El-Nahas and Paul von Ragué Schleyer

Direct Search Methods for the Molecular Conformation Problem 627
J. C. Meza and M. L. Martinez

Shape Analysis of Hydrogen-Bonded Networks in Solvation Clusters 633
Gustavo A. Arteca

Effect of Charge on Bond Strength in Hydrogenated Amorphous Silicon 644
B. W. Clare, G. Talukder, P. J. Jennings, J. C. L. Cornish, and G. T. Hefter

Atomic Orbital Basis Sets for Molecular Interactions 653
Herbert F. M. da Costa and David A. Micha

X-PLORing Extraribosomal Peptide Folding during Synthesis 662
Carl W. David

Diskette Submission Instructions 666

Issue 7, July 1994

New Spherical-Cutoff Methods for Long-Range Forces in Macromolecular Simulation 667
Peter J. Steinbach and Bernard R. Brooks

Internal Dynamics of a Globular Protein under External Force Field 684
Shuzo Yoshioki

Thermodynamic Integration Calculations on the Relative Free Energies of Complex Ions in Aqueous Solution: Application to Ligands of Dihydrofolate Reductase 704
Peter L. Cummins and Jill E. Gready

Failure of Net Atomic Charge Models to Represent the van der Waals Envelope Electric Potential of *n*-Alkanes 719
Donald E. Williams

Fast Geometry Optimization Using a Modified Extended Hückel Method: Results for Molecules Containing H, C, N, O, and F 733
Steven L. Dixon and Peter C. Jurs

Iterative Methods for the Calculation of a Few of the Lowest Eigenvalues and Corresponding Eigenvectors of the $\mathbf{AX} = \lambda\mathbf{BX}$ Equation with Real Symmetric Matrices of Large Dimension 747
Alexander V. Mitin

Force Field for Computation of Conformational Energies, Structures, and Vibrational Frequencies of Aromatic Polyesters 752
H. Sun

Expanding Molecular Dynamics Simulations to the NMR Time Scale. I. Studies of Conformational Interconversions of 1,1-Difluoro-4,4-Dimethylcycloheptane Using MM3-MD 769
Fanbing Li, Weili Cui, and Norman L. Allinger

High-Precision Atomic Computations from Finite Element Techniques: Second-Order Correlation Energies for Be, Ca, Sr, Cd, Ba, Yb, and Hg 782
Jesús R. Flores and P. Redondo

Diskette Submission Instructions 791

Issue 8, August 1994

Hash Codes for the Identification and Classification of Molecular Structure Elements 793
Wolf Dietrich Ihlenfeldt and Johann Gasteiger

New Implementation of a Program to Calculate Correlated Band Structures of Polymers: An Application to the Band Structure of Polyparaphenylene (PPP) 814
Ian J. Palmer and Janos Ladik

Normal Mode Analysis of Oligomeric Proteins: Reduction of the Memory Requirement by Consideration of Rigid Geometry and Molecular Symmetry 820
Jean-François Gibrat, Jean Garnier, and Nobuhiro Gō

Hybrid Monte Carlo: An Efficient Algorithm for Condensed Matter Simulation 838
M. E. Clamp, P. G. Baker, C. J. Stirling, and A. Brass

An Optimized AM1/MST Method for the MST-SCRF Representation of Solvated Systems 847
F. J. Luque, M. Bachs, and Modesto Orozco

Study of Localized Molecular Orbitals Using Group Theory Methods and Its Approach to the Many-Electron Correlation Problem. IV. The Symmetry-Adaptation of Many-Center Integrals and Hamiltonian Matrix Elements in MCSCF Calculations 858
Taijin Zhou and Amin Liu

Molecular Mechanics (MM3) Parameterization of Hydroxylamine and Methyl Derivatives 866
Guyan Liang, J. Phillip Bowen, and James A. Bentley

Triazene Proton Affinities: A Comparison between Density Functional, Hartree–Fock, and Post-Hartree–Fock Methods 875
Ann M. Schmiedekamp, Igor A. Topol, Stanley K. Burt, Holy Razafinjanahary, Henry Chermette, Timothy Pfaltzgraff, and Christopher J. Michejda

Explicitly Correlated Gaussian Functions with $\mathbf{r}_{12}^{2n}$ Factors for Calculations of the Ground State of the Helium Atom 893
Zhenghong Zhang and Ludwik Adamowicz

Cluster Analysis of Molecular Conformations 899
Peter S. Shenkin and D. Quentin McDonald

Announcement 917

Diskette Submission Instructions 918

Issue 9, September 1994

On the Functional Representation of Bond Energy Functions 919
U. Dinur and A. T. Hagler

Structure of Disiloxane: A Semiempirical and Post-Hartree–Fock Study 925
Gábor I. Csonka, Miklós Erdösy, and József Réffy

D-CICADA: A Software for Conformational PES Elucidation on Network of Workstations 937
Luděk Matyska and Jaroslav Koča

Conformational Study of Dipeptides: A Sensitivity Analysis Approach 947
Roberta Susnow, Clarence Schutt, Herschel Rabitz, and Shankar Subramaniam

Principal Component Analysis of Dipeptides 963
Roberta Susnow, Clarence Schutt, and Herschel Rabitz

Structural and Electronic Property Changes of the Nucleic Acid Bases upon Base Pair Formation 981
R. Santamaria and A. Vázquez

Long-Time Overdamped Langevin Dynamics of Molecular Chains 997
Niels Grønbech-Jensen and Sebastian Doniach

Decomposition Analyses of the Intermolecular Interaction Energies in Two $\pi-\pi$ Stacking Complexes: Quinhydrone and N,N,N',N'-Tetramethyl-*p*-Diaminobenzene-Chloranil Complex 1013
Yasuyuki Kurita, Chiyozo Takayama, and Shizuya Tanaka

A Force Field for Monosaccharides and (1 → 4) Linked Polysaccharides 1019
Timothy M. Glennon, Ya-Jun Zheng, Scott M. Le Grand, Brad A. Shutzberg, and Kenneth M. Merz, Jr.

Application of the Multiple Computer Automated Structure Evaluation Methodology to a Quantitative Structure–Activity Relationship Study of Acidity 1041
Gilles Klopman and Dan Fercu

Diskette Submission Instructions 1051

Issue 10, October 1994

Potential Energy Surfaces for Rh—CO from DFT Calculations 1053
W. Biemolt and A. P. J. Jansen

The Natural Atomic Orbital Point Charge Model for PM3: Multipole Moments and Molecular Electrostatic Potentials 1064
Bernd Beck, Guntram Rauhut, and Timothy Clark

Conformational Sensitivity Analysis of FKBP–FK506/Rapamycin Complexes 1074
Roberta Susnow, Nancie Senko, and Timothy Ocain

Conformation Energy around the N(sp^3)—O Single Bond 1091
Jean M. J. Tronchet and Istvan Komaromi

Efficient Parallelization of the Energy, Surface, and Derivative Calculations for Internal Coordinate Mechanics 1105
Maxim Totrov and Ruben Abagyan

On the Calculation of *Ab Initio* Quantum Molecular Similarities for Large Systems: Fitting the Electron Density 1113
Jordi Mestres, Miquel Solà, Miquel Duran, and Ramon Carbó

Incorporation of Bond-Length Constraints in Monte Carlo Simulations of Cyclic and Linear Molecules: Conformational Sampling for Cyclic Alkanes as Test Systems 1121
Alexander J. Pertsin, Jutta Hahn, and Hans P. Grossmann

GEPOL: An Improved Description of Molecular Surfaces. III. A New Algorithm for the Computation of a Solvent-Excluding Surface 1127
J. L. Pascual-Ahuir, E. Silla, and I. Tuñon

The Use of Fraga's Potential with AMI Atomic Point Charges in the Evaluation of Spectral Shifts: Application to TICT Molecules 1139
Alain-Dominique Gorse and Michel Pesquer

The Valence Isomers of $(CH)_8$ and $(SiH)_8$: An *Ab Initio* MO Study 1151
Uwe Versteeg and Wolfram Koch

A Computational Study of Azine, Azoethene, and Diimine Linkages in the Poly/Oligoazine System 1163
Brian K. Schmitz and William B. Euler

Stable Conformations of $CH_3CH_2OCH_2CH_2OH$: A Comparison of Theoretical Methods 1176
Brian T. Luke

Diskette Submission Instructions 1186

Issue 11, November 1994

Gaussian Multipoles in Practice: Electrostatic Energies for Intermolecular Potentials 1187
Richard J. Wheatley and John B. O. Mitchell

Transition Structure Modeling by Intersecting Potential Energy Surfaces 1199
Frank Jensen

The Effects of Solvent Screening in Quantum Mechanical Calculations in Protein Systems 1217
K. Baldridge, R. Fine, and A. Hagler

Comparison of the Molecular Mechanics + Generalized Born/Surface Area and the *Ab Initio* + Monte Carlo Simulation Methods in Estimating Conformational Equilibria in Aqueous Solution 1228
Peter I. Nagy, Joseph E. Bitar, and Douglas A. Smith

Reversed Stereochemical Preference in Binding of Ro 31-8959 to HIV-1 Proteinase: A Free Energy Perturbation Analysis 1241
B. G. Rao and M. A. Murcko

Thermodynamic Molecular Mechanics Force Field: Modified QCFF Program 1254
Mangalya Kar, Terry G. Lenz, and John D. Vaughan

Algorithm to Infer the Structures of Molecular Formulas within a Reaction Pathway 1266
Raúl E. Valdés-Pérez

Stability of Two-Dimensional Crystalline Aggregates of a Protein Studied by Molecular Dynamics 1278
Junichi Higo, Mariko Yamaki, Michiru Hogyoku, Takuya Takahashi, Shigeru Endo, and Kuniaki Nagayama

Linear Dependency in the Refinement of Force Constants with the Jacobian Method 1291
Fransiska S. Ganda-Kesuma and Kenneth J. Miller

A Rapidly Convergent Simulation Method: Mixed Monte Carlo/Stochastic Dynamics 1302
Frank Guarnieri and W. Clark Still

Combined Molecular Mechanical and Quantum Mechanical Potential Study of a Nucleophilic Addition Reaction in Solution 1311
Haiyan Liu and Yunyu Shi

Diskette Submission Instructions 1319

Issue 12, December 1994

Molecular Mechanics Calculations (MM2 and MM3) on Enamines and Aniline Derivatives 1321
N. L. Allinger, Liqun Yan, and Kuohsiang Chen

Algorithms for Clustering Molecular Dynamics Configurations 1331
Andrew E. Torda and Wilfred F. van Gunsteren

Ab Initio Study of Some $CH_3OCXYCH_2$ Radicals: The Influence of Anomeric Effects on Their Structure and Their Stability 1341
R. Arnaud

A Variational Biorthogonal Valence Bond Method 1357
Nathaniel O. J. Malcolm and Joseph J. W. McDouall

Variational Biorthogonal Valence Bond Descriptions of 1,3-Dipoles 1365
Nathaniel O. J. Malcolm and Joseph J. W. McDouall

Application of a High-Performance, Special-Purpose Computer, GRAPE-2A, to Molecular Dynamics 1372
Junichi Higo, Shigeru Endo, Kuniaki Nagayama, Tomoyoshi Ito, Toshiyuki Fukushige, Toshikazu Ebisuzaki, Daiichiro Sugimoto, Hiroo Miyagawa, Kunihiro Kitamura, and Junichiro Makino

Anisotropy of Atom-Atom Repulsions 1377
A. J. Stone and C.-S. Tong

Implementation of Artificial Intelligence for Automatic Drug Design. I. Stepwise Computation of the Interactive Drug-Design Sequence 1393
Alexander A. Cohen and Shimon E. Shatzmiller

A Rapid and Efficient Algorithm for Packing Polypeptide Chains by Energy Minimization 1403
Kenneth D. Gibson and Harold A. Scheraga

An Algorithm for Packing Regular Multistrand Polypeptide Structures by Energy Minimization 1414
Kenneth D. Gibson and Harold A. Scheraga

ToBaD: A Method for the Estimation of Torsion Barriers from Crystal Structure Data; Conformational Analysis of *N,N*-Dimethylaniline and Derivatives 1429
M. L. Verdonk, R. W. Tjerkstra, I. S. Ridder, J. A. Kanters, J. Kroon, and W. J. M. van der Kemp

Heats of Formation of Organic Molecules Calculated from *Ab Initio* Theory and a Group Equivalent Scheme: Alkenes 1437
Lawrence R. Schmitz and Yi Ren Chen

Molecular Mechanics (MM3) Calculations on Azoxy Compounds 1446
Yi Fan and Norman L. Allinger
